Case study

Computer Service Centre working in partnership with Walsingham College Trust

Walsingham has been a place of pilgrimage for centuries and is commonly considered “England’s Nazareth”.

Today the Shrine complex welcomes more than 10,000 residential pilgrims each year. In addition, a further 300,000 visitors visit Walsingham annually to find out more about one of England’s most religious locations.

“Having the support of Computer Service Centre has been invaluable as we have had new challenges.”

The Rt Revd Lindsay Urwin OGS
Administrator

We added a wireless network solution across their site and updated their core infrastructure.

The requirement

Walsingham College Trust Association Ltd's initial requirement was for a brand new centrally managed IT infrastructure for its 75 staff, guests and visitors. This later extended to wireless internet access across their geographically and structurally diverse site, which includes medieval buildings, a new refectory and retail shop.

The solution

We first began working with Walsingham College Trust Association Ltd over a decade ago and installed a completely new IT infrastructure including a traditional cabled network.

Since then, we have added a wireless network solution across their site and recently updated their core infrastructure by replacing their end-of-life servers with new hardware and software. This has introduced the latest technologies, including Terminal Services and Thin Clients, to help control IT expenditure and improve flexibility for the future while retaining a dependable and well-supported system for its users today.
