COMPUTER SERVICE CENTRE
TM

Cloud Computing

Computer Service Centre offers a variety of Cloud based services, some or all of which can add value to your business.

Focus on Hybrid Cloud

We deliver what we call Hybrid Cloud solutions to thousands of users. These services combine the principles of "your data, our centres" with the licencing efficiencies of Public Cloud products such as Microsoft Office 365. Many clients also take advantage of the cost benefits of Microsoft Exchange Online.

Cloud solutions to real world problems

Whilst there are many different types of Cloud based services, it can be difficult to separate the reality from the sometimes extravagant claims of the benefits being offered.

Although the headline offer of some Public Cloud services may seem incredibly attractive, when you have to integrate these into existing systems that depend on specific software versions, or if you have a duty of care for sensitive data, the reality may not be so appealing. The danger is that this can become apparent too late.

We focus on providing secure, centralised and professionally maintained hosted services to meet your business needs, or what are becoming known as Private Cloud services, from our own state-of the art Data Centres and MPLS network. Where appropriate, we can integrate these services with Public Cloud software services, such as Microsoft Office 365, to deliver Hybrid Cloud services.

The security, flexibility and additional level of control that Private or Hybrid Cloud offers, makes these services appropriate to a far wider range of businesses.
